- **2018 Prevention Internship Program Application Open**

The U.S. Department of Health and Human Services (HHS) Substance Abuse and Mental Health Services Administration's (SAMHSA) Center for Substance Abuse Prevention (CSAP) is accepting applications for the **2018 Prevention Internship Program**.

The **Prevention Internship Program**, a component of SAMHSA/CSAP's Prevention Fellowship Program, invites qualified individuals with strong interest in substance abuse prevention and behavioral health, for a *5-month paid* internship in participating Tribes and Tribal Organizations throughout the United States. (Visit the application Web site at www.seiservices.com/SAMHSA/csap/preventionfellowship for a list of participating locations.)

The **Prevention Internship Program** offers participants front-line experience in the field of substance abuse prevention within Tribes and Tribal Organizations across the country. The **Prevention Internship Program** will focus on preparing interns to provide capacity-building Technical Assistance (TA) to support integration of behavioral health prevention services within tribal organization systems. Interns will benefit from hands-on experience as well as trainings focusing on behavioral health and substance abuse prevention, the Strategic Prevention Framework, Cultural Responsiveness, and evaluation. The Prevention interns will learn new techniques, master best practices in the field, and apply knowledge gained from their professional and cultural experiences.

Prevention interns are accepted on a location-by-location basis, depending on the sites of Tribes and Tribal Organizations. **Interns will receive a stipend of \$15 – 20 per hour and will be required to work 40 hours per week from January 16 – May 11, 2018.**

Each intern will be assigned a mentor at his or her site. The mentor will be responsible for helping the intern to develop skills and learning, and for providing the intern with a detailed description regarding his or her roles and responsibilities. An intern's responsibilities may include designing, coordinating, implementing, or assessing the performance of substance prevention programs. The work may include developing prevention plans to increase substance misuse awareness; developing prevention education programs; organizing and participating in trainings for staff or other organizations; and preparing and maintaining reports, records, and documents pertaining to funding sources, data collection, and program evaluation.

Individuals seeking selection into the internship must meet the following criteria and provide associated documentation:

- (1) U.S. citizenship or U.S. Territories and Pacific Jurisdictions residency;
- (2) For education, an applicant must have completed **at least two (2) years of college** (or 60 credit hours) from an accredited academic institution, with an emphasis in public health, behavioral health, clinical or social science areas. In addition, students currently enrolled at a community college and who will earn their Associate Degree in public health, behavioral health, clinical or social science areas by May 31, 2018, are also eligible to apply;
- (3) Two letters of recommendation from an academic and/or professional reference;
- (4) A detailed essay (of no more than two pages) on why the candidate should be selected for the internship, and how selection would support his or her career goals (to be completed through the online application); and
- (5) Experience in substance abuse prevention and/or behavioral health prevention/promotion.

Applications will be accepted from eligible candidates through **Friday, December 1, 2017**. The program overview, application instructions, locations, FAQs and the online application are available at www.seiservices.com/SAMHSA/csap/preventionfellowship.

Applicants will be notified of their selection status on or before Friday, December 15, 2017. Selected candidates are expected to begin the Prevention Internship Program Tuesday, January 16, 2018.

For additional information, please contact the Prevention Fellowship Program at (240) 485-1700 or via email at preventionfellowship@seiservices.com.

• **Accepting applications for 2018-2020 Cohort: Wisconsin Population Health Fellowship Program**
Applications open on October 1, 2017 and are due December 16, 2017.

• **Public Health Officer Position with USAF**

The Air Force is currently accepting applications for an active duty public health officer position. You must apply now in order to be considered for selection in Dec 2017 for the position which starts after May 2018.

Applicants must have a Master's in Public Health (MPH/MSPH) plus a baccalaureate degree in nursing (BSN)*, biology, entomology, microbiology, or zoology in order to apply.

Air Force officers are entitled to full pay and benefit commensurate to their rank and education level. Some additional benefits of being active include a geographically unlimited license to practice all over the world, 30 days vacation with pay each year, full medical and dental coverage for you and your family, 20 year retirement plan, additional education and training opportunities at no cost to you!

Air Force Public Health Officers manage programs that focus on the following:

* Disease surveillance and prevention services ensure Airmen and their families are protected from communicable disease at home and while deployed. This program specifically focuses on sexually transmitted diseases, tuberculosis detection and control, animal bites, and community health surveillance for outbreaks and other reportable diseases.

* Food safety and public facility sanitation programs involve the continuous inspection and monitoring of food and public facilities on Air Force installations to prevent foodborne illness outbreaks. While deployed, Public Health Officers and enlisted technicians ensure deployed forces don't get sick from eating or drinking contaminated food and water.

* Force health management and medical readiness programs make sure our Airmen are healthy and medically fit for deployment. This program involves tracking annual health assessments, immunization status, and specific laboratory and preventive health testing. In addition, this program requires extensive pre and post-deployment health surveillance to ensure Airmen returning from deployment don't have malaria, psychological health issues, poor health outcomes due to environmental exposures or other serious conditions that require medical evaluation and treatment.

* Vector surveillance and entomology programs ensure Air Force communities and deployed Airmen are protected from diseases transmitted by insects, such as West Nile Virus, hantavirus, Lyme disease, and malaria. It is important for an Air Force Public Health Officer to know the types of diseases carried and transmitted by local vectors as well as vectors found in high threat environments like Africa, Southeast Asia, Latin America and the Middle East.

* Occupational and environmental health programs ensure worker safety and protection from hazardous chemicals, noise, and other workplace hazards. Air Force Public Health Officers manage occupational exams and hearing conservation programs for both active duty Airmen and civilian employees assigned to their installation. They also conduct surveillance for occupational injuries and illness to detect and prevent workers from being harmed.
